RAINBOW SIX: EXTRACTION

MAP DESIGN

Ionica Eugen-Nicolae

San Francisco Casino

REQUIREMENTS

Level based on the original Rainbow 6 Vegas – Calypso Casino map:

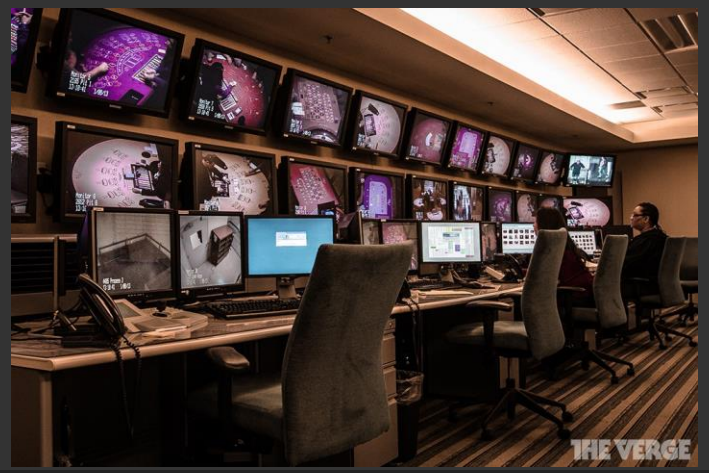
- The map must contain **3 sub-levels** – each contain a connection point (**Airlocks**) towards the other 2 sub-levels;
- The sub-levels need to be, to a degree, **vertically** overlapped – must-have;
- Themes need to reflect original **Calypso Casino themes**.

Gameplay must-haves:

- Sub-levels need to be similarly sized;
- Each need to contain an Extraction point that serves as Game Start and Match end;
- All must contain R6:Extraction Destruction elements and multiple paths through the level.

- Top Floor - Lobby room / Café bar / Terrace
- Middle floor - Casino Gambling floor
- Bottom floor - Security / vault / servers

THEMATICS



MAP DESIGN PROCESS

REQUIREMENTS

- Map design is split into 2 parts – **Full map design** and **Casino+Rooftop sub-level map design**. I was responsible for putting together the initial Full map design, alongside References and Thematics and for fully implementing the Casino and the Rooftop sub-levels.
  - This map was developed at the same time as the Main project Studio was developing theirs, so a lot of changes happened from the initial design to the final implementation – most evident in the final pages with Shipping screenshots.
- The Art direction related to the Parasite took a long time to coalesce, so the maps went through even more iteration when it became clear how the Alien Structures must impact the layout perception.
